## Detection of Malingering during Head Injury Litigation

Increased public awareness of traumatic brain injuries has fueled a number of significant developments: on the one hand, more funding and more research related to these injuries and their resulting deficits; on the other, the possibility of higher stakes in personal injury suits and more reasons for individuals to feign injury. Expanding both the conceptual and clinical knowledge base on the subject, the Second Edition of *Detection of Malingering during Head Injury Litigation* offers the latest detection tools and techniques for veteran and novice alike. As in its initial incarnation, this practical revision demonstrates how to combine clinical expertise, carefully-gathered data, and the use of actuarial models as well as common sense in making sound evaluations and reducing ambiguous results. And, the book navigates the reader through the many caveats that come with the job, beginning with the scenario that an individual may be malingering despite having an actual brain injury. Among the updated features: •Specific chapters on malingering on the Halstead-Reitan, Luria-Nebraska, and MMPI-2. •A framework for distinguishing genuine from factitious PTSD in head injury cases. •Detailed information regarding performance on the WMT, MSVT, and NV-MSVT by children with developmental disabilities. •Guidelines for explaining symptom validity testing to the trier of fact. •Entirely new chapters on mild TBI and on malingering of PTSD symptoms in the context of TBI litigation. Professional neuropsychologists and forensic psychologists will appreciate this new edition of *Detection of Malingering during Head Injury Litigation* as an invaluable source of refinements to their craft, and improvement as an expert witness.
