Biological Neural Networks in Invertebrate Neuroethology and Robotics (Neural Networks: Foundations to Applications)

Biological Neural Networks in Invertebrate Neuroethology and Robotics (Neural Networks: Foundations to Applications)

This is the first book to integrate research by neuroethologists interested in the neural basis of animal behavior and roboticists interested in building versatile and robust robots. Biological Neural Networks in Invertebrate Neuroethology and Robotics contains 17 papers that survey neural control of movement and orientation, describe computer models of neural control circuits, and give examples of actual robot implementations. This book is the second volume in Academic Press' new series NEURAL NETWORKS: FOUNDATIONS TO APPLICATIONS, which seeks to emphasize the interdisciplinary exchange of ideas that is central to advances in neural networks research.

* Presents for the first time the results of research at the intersection of the fields of neuroethology and robotics

* Emphasizes potential advances for both biologists and engineers

From reader reviews:

Michael Naylor:

Spent a free a chance to be fun activity to perform! A lot of people spent their spare time with their family, or all their friends. Usually they carrying out activity like watching television, planning to beach, or picnic within the park. They actually doing same every week. Do you feel it? Do you want to something different to fill your own free time/ holiday? May be reading a book is usually option to fill your free time/ holiday. The first thing you ask may be what kinds of publication that you should read. If you want to consider look for book, may be the guide untitled Biological Neural Networks in Invertebrate Neuroethology and Robotics (Neural Networks: Foundations to Applications) can be great book to read. May be it can be best activity to you.

William Boehme:

People live in this new day time of lifestyle always try to and must have the spare time or they will get lots of stress from both day to day life and work. So , once we ask do people have extra time, we will say absolutely indeed. People is human not only a robot. Then we inquire again, what kind of activity do you have when the spare time coming to you of course your answer will unlimited right. Then do you ever try this one, reading guides. It can be your alternative throughout spending your spare time, the particular book you have read is usually Biological Neural Networks in Invertebrate Neuroethology and Robotics (Neural Networks: Foundations to Applications).

Nancy Page:

Are you kind of hectic person, only have 10 or 15 minute in your day to upgrading your mind proficiency or thinking skill even analytical thinking? Then you have problem with the book when compared with can satisfy your short time to read it because this time you only find book that need more time to be study. Biological Neural Networks in Invertebrate Neuroethology and Robotics (Neural Networks: Foundations to Applications) can be your answer since it can be read by an individual who have those short extra time problems.

Tanya Wilson:

As a college student exactly feel bored in order to reading. If their teacher asked them to go to the library or make summary for some publication, they are complained. Just minor students that has reading's soul or real their pastime. They just do what the professor want, like asked to go to the library. They go to right now there but nothing reading really. Any students feel that examining is not important, boring and can't see colorful pictures on there. Yeah, it is to be complicated. Book is very important for you. As we know that on this age, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore this Biological Neural Networks in Invertebrate Neuroethology and Robotics (Neural Networks: Foundations to Applications) can make you really feel more interested to read.
