Extreme Value Modeling and Risk Analysis: Methods and Applications

Extreme Value Modeling and Risk Analysis: Methods and Applications

Extreme Value Modeling and Risk Analysis: Methods and Applications presents a broad overview of statistical modeling of extreme events along with the most recent methodologies and various applications. The book brings together background material and advanced topics, eliminating the need to sort through the massive amount of literature on the subject.

After reviewing univariate extreme value analysis and multivariate extremes, the book explains univariate extreme value mixture modeling, threshold selection in extreme value analysis, and threshold modeling of non-stationary extremes. It presents new results for block-maxima of vine copulas, develops time series of extremes with applications from climatology, describes max-autoregressive and moving maxima models for extremes, and discusses spatial extremes and max-stable processes. The book then covers simulation and conditional simulation of max-stable processes; inference methodologies, such as composite likelihood, Bayesian inference, and approximate Bayesian computation; and inferences about extreme quantiles and extreme dependence. It also explores novel applications of extreme value modeling, including financial investments, insurance and financial risk management, weather and climate disasters, clinical trials, and sports statistics.

Risk analyses related to extreme events require the combined expertise of statisticians and domain experts in climatology, hydrology, finance, insurance, sports, and other fields. This book connects statistical/mathematical research with critical decision and risk assessment/management applications to stimulate more collaboration between these statisticians and specialists.

From reader reviews:

David Bolds:

Book is written, printed, or created for everything. You can learn everything you want by a publication. Book has a different type. As you may know that book is important matter to bring us around the world. Adjacent to that you can your reading expertise was fluently. A guide Extreme Value Modeling and Risk Analysis: Methods and Applications will make you to possibly be smarter. You can feel far more confidence if you can know about every little thing. But some of you think in which open or reading a new book make you bored. It is not necessarily make you fun. Why they are often thought like that? Have you searching for best book or suitable book with you?

John Harris:

The book Extreme Value Modeling and Risk Analysis: Methods and Applications can give more knowledge and also the precise product information about everything you want. So why must we leave the great thing like a book Extreme Value Modeling and Risk Analysis: Methods and Applications? A number of you have a different opinion about guide. But one aim which book can give many details for us. It is absolutely suitable. Right now, try to closer along with your book. Knowledge or info that you take for that, you are able to give for each other; it is possible to share all of these. Book Extreme Value Modeling and Risk Analysis: Methods and Applications has simple shape however you know: it has great and massive function for you. You can seem the enormous world by wide open and read a reserve. So it is very wonderful.

Zoe Harris:

Book is to be different for every single grade. Book for children until finally adult are different content. To be sure that book is very important normally. The book Extreme Value Modeling and Risk Analysis: Methods and Applications had been making you to know about other expertise and of course you can take more information. It is very advantages for you. The reserve Extreme Value Modeling and Risk Analysis: Methods and Applications is not only giving you much more new information but also being your friend when you sense bored. You can spend your spend time to read your publication. Try to make relationship while using book Extreme Value Modeling and Risk Analysis: Methods and Applications. You never experience lose out for everything in case you read some books.

Katherine Contreras:

Some people said that they feel bored stiff when they reading a publication. They are directly felt this when they get a half areas of the book. You can choose the book Extreme Value Modeling and Risk Analysis: Methods and Applications to make your own personal reading is interesting. Your personal skill of reading skill is developing when you such as reading. Try to choose straightforward book to make you enjoy you just read it and mingle the impression about book and examining especially. It is to be 1st opinion for you to like to start a book and read it. Beside that the publication Extreme Value Modeling and Risk Analysis: Methods

and Applications can to be your brand-new friend when you're really feel alone and confuse in doing what must you're doing of this time.
